

CosmiCode

Educating the Next Wave of Tech Pioneers.

Week 6 Tasks

Week 6: Advanced Topics and Final Project

- Set up and configure a Web Application Firewall (WAF) using ModSecurity.
- Implement and test encryption protocols (SSL/TLS) on a web server.
- Perform a social engineering attack simulation using SET (Social-Engineer Toolkit).
- Develop a custom script to automate a common security task using Python.
- Complete a final project: Conduct a full security assessment of a network or web application, document findings, and present your report.
