

CosmiCode

Educating the Next Wave of Tech Pioneers.

Week 4 Tasks

Week 4: Web Application Security

- Perform an SQL injection attack on a test web application and mitigate it.
- Execute a cross-site scripting (XSS) attack and implement defenses.
- Test a web application for cross-site request forgery (CSRF) vulnerabilities.
- Conduct a security assessment on a web server (Apache, Nginx, or IIS).
- Secure a web application by implementing secure coding practices.
